

Tim Presley

Head of User Experience | Design Systems, UX Strategy & AI-Enabled Product Teams

Houston, TX | 210-834-9510 | tpresley1764@gmail.com | [LinkedIn](#) | www.timpresleyux.com

PROFESSIONAL SUMMARY

UX executive with 28+ years leading design transformation across complex enterprise software portfolios. Builds and leads high-performing, multidisciplinary design teams, and has been an early adopter of AI-augmented design workflows — embedding AI-assisted tooling, research synthesis, and design-to-development automation into day-to-day team practice years ahead of broader industry adoption. Deep expertise in enterprise design systems, UX governance, and translating research and AI-generated insight into product roadmap decisions.

CORE COMPETENCIES

UX Leadership & Team Development • AI-Enabled Design Operations • Enterprise Design Systems at Scale • UX Strategy & Roadmap Influence • Design Governance • Cross-Functional & Executive Stakeholder Management • AI-Augmented Research & Documentation • Accessibility (WCAG) • Agile / Lean Delivery • Mentorship & Org Development

PROFESSIONAL EXPERIENCE

Head of User Experience, Digital Drilling Portfolio

Oct 2024 – Present

Halliburton – Sperry Drilling | Houston, TX

- Lead UX strategy and a 4-person multidisciplinary design team for a global digital drilling software portfolio (LOGIX, MaxReceiver, Design of Service), supporting real-time, high-stakes field operations.
- Built two AI-powered tools that changed how the team worked day to day: an internal design-system assistant, built on the Claude API, that gives designers and engineers instant answers on components and standards; and an AI-assisted design-to-development handoff, using GitHub Copilot Agent mode, that turns finished designs into starter code automatically. Together, these cut discovery time 45%, design time 30%, and design-to-dev handoff time 60% across 14 engineering teams.
- Designed and shipped Design of Service (DOS) — the tool Country Managers, Technical Leads, and engineers use to define well information, drilling information, and cost estimates in the earliest stage of winning a drilling bid. Replaced a manual process spread across multiple external applications with one digitized platform, streamlining all data into a single source of truth. Led the effort from research through a soft launch across 3 countries and 700 users, cutting completion time 33% and establishing DOS as the new standard workflow.
- Architected a token-based enterprise design system (Style Dictionary, governed Storybook component library) adopted across 5 product verticals, replacing inconsistent, team-by-team UI work with one shared system.
- Built the team's operating model from the ground up — standardized intake, research, design QA, and a design system playbook — where none had existed before; previously, delivery managers hired designers ad hoc per team with no shared process.
- Partner with product and engineering leadership, translating AI-augmented research insight into prioritized roadmap decisions.

Head of User Experience – Enterprise Energy Solutions

Nov 2021 – Oct 2024

Halliburton – Landmark | Houston, TX

- Led and scaled a UX organization across a large, matrixed enterprise SaaS portfolio spanning reservoir modeling, drilling, and geoscience applications.
- Directed multidisciplinary design teams across multiple product lines, managing people, process, and technical direction across concurrent workstreams.
- Rebuilt UX foundations — intake, prioritization, research cadence, and review structures — cutting design-to-development churn 25–40% and improving release predictability.
- Standardized design systems, accessibility (WCAG) practices, and workflow patterns across the product ecosystem.
- Piloted early AI-assisted design and documentation tooling within the team, laying the operating foundation for the AI-enabled design practice later scaled at Sperry Drilling.

Lead UX Designer

Jan 2014 – Nov 2021

Halliburton – Landmark | Houston, TX

- Led UX design across Landmark's DecisionSpace product portfolio, including Agile Asset Management (AAM), Digital Well Program (DWP), Real-Time Well Engineering (RTWE), and geoscience/geophysics applications — spanning subsurface interpretation, well planning, and real-time drilling decision-making.
- Partnered with product and engineering teams to design workflows supporting capital project decisions, well construction planning, and real-time operational decision-making across the asset lifecycle.
- Stepped into a co-lead capacity beginning Nov 2019, sharing UX leadership responsibility across the portfolio ahead of transitioning into the Head of User Experience role in Nov 2021.

Lead UX Designer

Apr 2012 – Jan 2014

Pearson | San Antonio, TX

- Directed UX/UI design across Pearson's Q-Global and Q-Interactive assessment platforms, managing design work from concept through delivery for cross-functional product teams.
- Managed a UX/UI design team, coordinating deliverables across concurrent workstreams on two production assessment platforms.
- Partnered with business analysts and digital content developers to translate complex assessment workflows into user-centered, production-ready designs.

Lead UX Designer

Aug 2010 – Apr 2012

Security Service Federal Credit Union | San Antonio, TX

- Owned end-to-end UX for SSFCU's online and mobile banking platforms — research, testing, design, and implementation across all stages of development.
- Coordinated with product and marketing teams to align UX deliverables with business goals and member-facing banking experiences.
- Delivered consumer-facing design solutions for core banking workflows used by SSFCU's member base.

EARLIER CAREER

Manager, UX & Web Development, UT Health San Antonio — Manager, UI Design, Texas Management Associates (USAF)

EDUCATION

M.Ed., Educational Technology — University of Texas Rio Grande Valley

B.S., Computer Science — Park University

A.A., Graphic & Multimedia Design — Texas State Technical College

TOOLS & METHODS

Figma • Design Tokens / Style Dictionary • Storybook • Angular / PrimeNG • AI-Augmented UX Workflows (Claude API, GitHub Copilot Agent) • Agile / Lean Delivery • WCAG Accessibility • Analytics
